The more developed a society in general or every person in particular, obviously the more demanded knowledge is. It is the “movement for more developed people”. To enhance knowledge consumption, the importance of education is certainly the top priority. In Vietnam, “developing an educational society” is an important mission for universities and to do this, there is no better alternative for distance education.

In all the video conference system we have tried and applied at BDU and after more than 4 years of using TrueConf Server (TCS) we have come to the conclusion that only TCS provide us excellent audio quality, Full HD video, highly secured conference with industry standard techniques and low support time due to its simplicity. TCS provides all of these in a low cost package helping us to lower the cost for ourselves and our students, improve efficiency and quality of our classes.

BDU setup distance learning with TrueConf Video Conference system and erase the educational disparity between potential people and those without, allowing the latter to access high quality education; breaking the traditional walls of classroom, bringing lessons to students anytime, anywhere.

We would like to thank TrueConf Ltd. for providing an amazing piece of software with low total cost of ownership and for your continual support for the past few years. We hope that this relationship keeps flourishing in the future.

All the best,

Thanh Le / Mr / Dir
